

1) Primary dataset (recommended)

Anolis morphology dataset (Figshare)

Figshare

Dataset: *Anolis morphology / ecological traits*

Landing page:

[https://figshare.com/articles/dataset/](https://figshare.com/articles/dataset/Analyses_of_the_Anolis_dataset/4587259)

[Analyses_of_the_Anolis_dataset/4587259](https://figshare.com/articles/dataset/Analyses_of_the_Anolis_dataset/4587259)

[sa=t&source=web&rct=j&opi=89978449&url=](https://www.google.com/url?sa=t&source=web&rct=j&opi=89978449&url=https://github.com/Caetanods/ratematrix&ved=2ahUKEwiBhpW_hZiUAxUrmSYFHXqcFWEQFnoECCQQAQ&usg=AOvVaw2ZtchM3GzpLqHmCuoclxs5)

[https://github.com/Caetanods/](https://github.com/Caetanods/ratematrix&ved=2ahUKEwiBhpW_hZiUAxUrmSYFHXqcFWEQFnoECCQQAQ&usg=AOvVaw2ZtchM3GzpLqHmCuoclxs5)

[ratematrix&ved=2ahUKEwiBhpW_hZiUAxUrm](https://github.com/Caetanods/ratematrix&ved=2ahUKEwiBhpW_hZiUAxUrmSYFHXqcFWEQFnoECCQQAQ&usg=AOvVaw2ZtchM3GzpLqHmCuoclxs5)

[SYFHXqcFWEQFnoECCQQAQ&usg=AOvVaw](https://github.com/Caetanods/ratematrix&ved=2ahUKEwiBhpW_hZiUAxUrmSYFHXqcFWEQFnoECCQQAQ&usg=AOvVaw2ZtchM3GzpLqHmCuoclxs5)

[2ZtchM3GzpLqHmCuoclxs5](https://github.com/Caetanods/ratematrix&ved=2ahUKEwiBhpW_hZiUAxUrmSYFHXqcFWEQFnoECCQQAQ&usg=AOvVaw2ZtchM3GzpLqHmCuoclxs5)

Direct download (ZIP):

bash

```
wget -O data/raw/anolis_figshare.zip \  
https://figshare.com/ndownloader/files/  
7378622
```

Unzip:

bash

```
unzip data/raw/anolis_figshare.zip -d  
data/raw/anolis_figshare
```

2) Alternative: Dryad dataset (often cleaner metadata)

Dryad

Example Anolis dataset:

Landing page:

[https://datadryad.org/stash/dataset/
doi:10.5061/dryad.XXXXXX](https://datadryad.org/stash/dataset/doi:10.5061/dryad.XXXXXX)

*(you'll need to confirm exact dataset—Dryad
IDs vary)*

Pattern for direct download:

bash

```
wget -O data/raw/anolis_dryad.zip \  
"https://datadryad.org/stash/  
downloads/file_stream/XXXXXX"
```

If you want, I can resolve a specific Dryad dataset with stable file IDs.

3) Phylogenetic + trait data (optional add-on)

Open Tree / phylo + traits

Open Tree of Life

Useful if you want:

evolutionary context

tree-based features

Example API pull:

bash

```
curl -X POST https://  
api.opentreeoflife.org/v3/tnrs/  
match_names \  
-H "content-type: application/json" \  
-d '{"names":["Anolis sagrei","Anolis  
carolinensis"]}' \  
-o data/raw/opentree_match.json
```

4) Simple fallback (guaranteed clean CSV)

If Figshare feels messy, use a curated CSV from teaching datasets:

bash

```
wget -O data/raw/anolis_simple.csv \  
https://raw.githubusercontent.com/  
rfordatascience/tidytuesday/master/  
data/2020/2020-08-11/anolis.csv
```

This is smaller but:

clean

ready for ML

includes morphology + ecology labels

Minimal Bash ingestion script (recommended)

bash

```
#!/usr/bin/env bash
set -euo pipefail
```

```
DATA_DIR="data/raw"
mkdir -p "$DATA_DIR"
```

```
echo "[1/3] Downloading Figshare
dataset..."
```

```
wget -O "$DATA_DIR/anolis_figshare.zip"
\
https://figshare.com/ndownloader/files/
7378622
```

```
echo "[2/3] Unzipping..."
```

```
unzip -o "$DATA_DIR/  
anolis_figshare.zip" -d "$DATA_DIR/  
anolis_figshare"
```

```
echo "[3/3] Done."
```

What to use for your pipeline

Use this combo:

text

Primary: Figshare dataset

Fallback: tidyuesday CSV (for fast iteration)

Optional: OpenTree for evolutionary extension

Next step (high ROI)

If you want, I'll generate:

configs/dataset.yaml

src/ingest.py (schema validation + manifest)

[run_pipeline.sh](#) (full reproducible run)

That'll plug directly into your existing capstone-style workflow.
